DATE MAILED: 04/07/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/027,714

Applicant(s)

AUSTIN ET AL.

Examiner

Thomas Szymanski

Art Unit

2134

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 January 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) 22-34 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 12/21/2001 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-21 in the reply filed on 01/05/2006 is acknowledged.
2. Claims 1-21 have been examined.

Drawings

3. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2134

5. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Togawa U.S. Patent No. 6,240,530, and further in view of Drake U.S. Patent No. 6,006,328.
6. Togawa teaches a system for the detection and removal of computer malware.
7. Togawa fails to teach explicitly searching for observer programs as part of that malware.
8. Drake teaches security methods to protect against attacks by malicious software such as eavesdropping malware.
9. It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to combine the system of Drake with that of Togawa for the advantages of improved security by adding the features of protection against such malicious activities as eavesdropping to the ability of the scanning system as described by Togawa.
10. It is desirable within any computer system to maintain the security and integrity of such a system while preventing damage to the data and components included therein. Drake teaches protection of the client computer system against malicious software as does Togawa. Although each system teaches protection against a different type of malware by way of scanning the computer system, protecting against all forms of malware is desirable. (Drake Col 3 lines 30-52)
11. Regarding Claims 1 and 21: Observer program data characteristics descriptive of a plurality of observer programs where the observer programs are programmed to

Art Unit: 2134

observe activities on a computer system and to create log data. (Togawa Fig 1.s1, Col 5 lines 10-19 Drake Fig 4,5 Col 3 lines 31-52) As it is understood the detection of a virus and its type as within Togawa requires recognition of characteristics of a virus. Those characteristics residing within the computer systems various components as any particular virus infects that system; so then the same is true within the combined system for the detection of an observer program as defined by Drake.

Obtain memory data of the computer by using computer instructions (Togawa Fig 1, Col 8 lines 14-30) As explained above the detection of the malware requires checking the system which is inclusive of the memory data; therefore in order for the functionality to proceed it must in some way obtain such data for scanning.

Comparing memory data with observer program data characteristics for detection of an observer program (Col 8 lines 14-30) As it is known within the art virus scanning is the process of comparing two such sets of data. Further within the combined system the observer program characteristics are included within the set of the compared traits.

Generating a result of whether an observer program is present (Fig 1, Fig 3-4 Col 5 lines 10-38) Detection denotes that a result is generated as to the response of the scanning process.

Presenting results through a GUI (Fig 3-4, Col 5 lines 39-50, Col 13 lines 8-55, Col 14 lines 18-25) As denoted the display performs functions of disseminating operational information which is in a graphical form and presented within an OS that the user is capable of interacting with.

Art Unit: 2134

12. Regarding Claims 2 and 3: Memory data includes startup and registry startup commands (Col 8 lines 14-30, Col 13 lines 19-56) As stated the memory contains all necessary information for the processes of the machine; these processes being inclusive of starting up necessary portions for operation thereof; such as the OS which includes a registry and the virus detection that being its own implementation scans the memory that these commands are located within.

13. Regarding Claims 4 and 5: Observer program characteristics include observer import/export table data for comparison with memory import/export table data to determine the presence of an observer program (Col 8 lines 14-30, Col 13 lines 19-56) As explained above all of the common features of the memory and functionality of the system are scanned via the anti-malware system.

14. Regarding Claim 6: Observer program characteristics include observer resource data for comparison with memory resource data to determine the presence of an observer program (Col 8 lines 14-30, Col 13 lines 19-56)

15. Regarding Claim 7: Observer program characteristics include observer file content data for comparison with memory file content data to determine the presence of an observer program (Col 8 lines 14-30, Col 13 lines 19-56) Additionally, as is shown and well known within the art file content is compared to malware characteristics for detection of such programs located commonly in such a place.

16. Regarding Claim 8: The comparing instruction compare the observer file content data with memory file content data at an offset address (Fig 1, Fig 3-4, Col 5 lines 10-20, Col 13 lines 19-56) The process of scanning for malware is inclusive of the entire

Art Unit: 2134

range of memory; therefore the process must offset the data being scanned by that which has already been.

17. Regarding Claim 9: The comparing instruction compare the observer file content data with a span of the memory file content data identified by an offset address (Fig 1, Fig 3-4, Col 5 lines 10-20, Col 13 lines 19-56) The process of scanning for malware is inclusive of the entire range of memory; therefore that which is scanned is a span of memory that is offset by the amount previously scanned.

18. Regarding Claim 10: Observer program characteristics include observer module loading data for comparison with memory module loading data to determine the presence of an observer program (Col 5 lines 10-20, Col 13 lines 19-56)

19. Regarding Claim 11: Observer program characteristics include OS observing functions for comparison with memory functions from the memory data to determine the presence of an observer program (Col 5 lines 10-20, Col 13 lines 19-56)

20. Regarding Claim 12: Memory data includes explorer extension data (Col 13 lines 19-56)

21. Regarding Claim 13: Memory data includes file use information (Col 13 lines 19-56)

22. Regarding Claim 14: Memory data includes process information (Col 13 lines 19-56)

23. Regarding Claim 15: Memory data includes running process information (Col 13 lines 19-56)

Art Unit: 2134

24. Regarding Claim 16: Memory data includes loaded module information (Col 13 lines 19-56)

25. Regarding Claim 17: Memory data includes driver data (Col 13 lines 19-56)

26. Regarding Claim 18: Memory data includes kernel driver data (Col 13 lines 19-56) All of the above stated separate memory data components are included within any resident memory of a common computer system that a system such as the combination of Togawa and Drake would be implemented upon.

27. Regarding Claims 19 and 20: Instruction to disable an observer program if present (Fig 1, Fig 10, Col 5 lines 10-50, Col 19 line 15 – Col 20 line 65)

Entering a startup command to load a kill program before the observer program is started (Fig 10, Col 19 line 15 – Col 20 line 65) As shown within the figure the system clears the memory then loads a secondary extermination routine, inclusive of the secondary OS and associated extermination routine, so that the observer program is not reloaded and instead the kill program is loaded and executed.

Rebooting the computer (Fig 1, Fig 10) As it is shown after the detection and initial clearing of memory the system must be rebooted with a separate non-infected operating system to further allow for the deletion of any other virus elements.

Starting the kill program by execution of the startup command (Fig 10, Col 19 line 15 – Col 20 line 65) As explained above the kill program is loaded at startup so the virus may not load.

Deleting the observer program startup command and files (Fig 10, Col 19 line 15 – Col 20 line 65) The process of clearing the memory as stated within the cited lines and exterminating the malware is the process of deleting the startup command.

Response to Arguments

28. Applicant's arguments filed 1/05/2006 have been fully considered but they are not persuasive.

29. In response to the applicant's argument of prior art labels for figures 1 and 2, the examiner withdraws the requirement for figure 2 as it can be seen that such a figure may be unique to the applicant's discussion. However, with regard to figure 1 the objection is maintained because only that which is old is illustrated. Figure 1 clearly depicts a low level block diagram of a typical computing system within the art, which is well-known and thus requires a prior art legend.

30. In response to the applicant's argument of the combined reference failing to show "observer data comprising a plurality of observer program characteristics descriptive of a variety of observer programs...", Togawa clearly teaches data that is representative of characteristics of virus programs and when combined with the teachings of Drake incorporates observer programs into the Togawa system and thus provides for this limitation. Togawa states (Col 5 lines 9-15) "...memory for storing programs and **data** for information processing and a processing section for executing the programs to perform various information processing, comprising a **virus detection** and **identification** section for detecting a computer virus.... and identifying a type of the

Art Unit: 2134

detected computer virus..". The recitation by Togawa of identifying a type of virus clearly anticipates program characteristics. Type as defined is "A number of things having in common traits or **characteristics** that distinguish them as a group or class", as it can be seen Togawa clearly provides for a manner of identification of types of programs or programs with variable characteristics thus providing for recognition of data that consists of a plurality of program characteristics. Furthermore, it is an inherent functionality within such a program to provide for the comparison of known characteristics of malware with the data being scanned in order to identify the programs. For further reference see Togawa Col 10 lines 25-67.

31. The applicant has argued further that the limitation "...the observer programs are programmed to observe activities on a computer system and to create log data." is not taught by the combined reference. The teachings of Drake within the combination clearly anticipates such observer programs. The applicant states that "rogue software eavesdropping" and "anti-spy techniques" does not teach or suggest observer programs, but from the definition of Drake of rogue software such programs are clearly anticipated. See Drake abstract, Col 1 lines 45-67, Col 2 lines 1-18, **18-32**. Drake recites many different types of observer programs as being rogue software and further teaches that such programs monitor, steal, and store data of the resident computer, thus anticipating observer programs and creating log data.

32. In response to the applicant's argument of the limitation "comparing instructions that compare the plurality of observer program characteristics with memory data characteristics to determine whether an observer program is present on the computer."

Art Unit: 2134

Drake provides for virus detection of viruses that are resident within the computer system being scanned, such viruses are logically located in the memory of said computer system and the provided virus check program inherently performs a comparison of memory data and observer program characteristics as the inherent nature of such a program dictates within the combination. See Togawa Fig 2, 5, 12, 14, Col 10 lines 33-37, 38-67, Col 16 lines 55-67. Togawa provides for detection of memory resident viruses and observer programs within the combination and wherein the steps of clearing memory are taken and files are restored additional detection and removal of malware within those files. see Togawa Col 8 line 10- Col 10 line 67.

33. Regarding the applicant's argument of Malware as used within the office action. Togawa clearly teaches the detection of a type of malware (viruses) and in combination with Drake clearly anticipates all malware (Drake Col 1 lines 45-67, Col 2 lines 1-32).

Conclusion

34. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2134

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

35. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant is reminded that in amending in response to a rejection of claims, the patentable novelty must be clearly shown in view of the state of art disclosed by the references cited and the objections made. Applicant must show how the amendments avoid such references and objections. See 37 CFR 1.111(c).

36. Inquiries concerning this communication or earlier communications from the examiner should be directed to Thomas M. Szymanski who can be reached at (571) 272-8574. The examiner's normal working schedule is between the hours 8:00am – 4:30pm (EST), Monday – Friday.

37. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacques Louis-Jacques, can be reached at (571) 272-6962. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

38. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
